

Commercial / Industrial RO Plants are best suitable for normal drinking application to the specific usage, such as Food Processing, Pharmaceuticals, Dialysis, Boiler Feeding, Beverages Effluent and Wastewater Purification, Fruit Syrup Production, Hydrogen Production and various other Commercial/Industrial usages.

Over View: Our commercial/industrial range of RO water treatment plants production available from 100 to 1, 00,000 LPH of capacity. All systems are designed and tested for easy installation. We are utilizing the high quality components and advance system designs. User can use the system with years of trouble free service.

**ION INDIA LIMITED** RO water treatment plant is using the reverse osmosis principle to treat water and make it suitable for the usage in commercial/industrial purposes. The commercial/industrial RO Plant is the most cost effective water treatment system for any commercial/industrial establishments. The commercial/industrial RO Systems cleans the water contaminants and removes non-essential and corrosive salts, metals, chemicals etc., present in the water and thus making water safe for tools and equipment's used in the commercial/industrial activities.

RO based water treatment plants have been in use for quite some time but have been under-utilized or have been used only in a limited manner.

Our special attention to understand the requirement of clients and further, designing & engineering suitable commercial/industrial RO Water Treatment Plants, has made a proffered name. The Reverse Osmosis plant for commercial/industrial water treatment by **ION INDIA LIMITED** is extensively used by industries for commercial water treatment needs purposes.
